Clinical translation: from bench to bedside

Every ground-breaking medical discovery faces the difficult hurdle of translation - being taken out of the lab and being developed into a product that can be used at a patient's bedside.

In this online seminar, hosted by the ARC Training Centre for Innovative BioEngineering, we will hear from pioneers in the field about their own personal journeys on the road to translation, taking their research out of the lab and into the clinic. This opportunity to learn from and be linked with mentors who are among the brightest minds in the Australian bioengineering landscape is not to be missed.

The Australian Research Centre for Innovative BioEngineering (ARCTCIBE) provides the next generation of researchers with the interdisciplinary skills and mentorship to be leaders in the rapidly evolving, highly innovative field of bioengineering. The event is a significant step in this journey.
